Advantages

The MAGX2 has an innovative modular design „Plug & Play“; it is a fit-all, flexible, low-cost flow meter all at the same time. The transmitter consists of the low-cost basic unit plus optional modules according to the end-user's requirements. Each module is in fact a small electronic board, the size of a large stamp, which can be freely installed and removed from the main board in seconds.

You do not pay for options you do not want or need.
You can build a flowmeter exactly as per your requirements.
You can upgrade your flow meter at anytime in the future.

UPGRADES

Choose your communication
 Choose your outputs
 Choose your memory modules

- 🔹 Accuracy – $\pm 0.2\%$ (0.5 - 10 m/s) of actual value
- 🔹 Temperature sensor – to measure temperature of the measured medium
- 🔹 Communication protocol – all communications via MODBUS RTU
- 🔹 Autocleaning – automatic electrodes cleaning
- 🔹 Unique design – any upgrade, extra features inside of the flowmeter, extra protection - „Built-in design“
- 🔹 Graphic display – multi-language menu. Higher protection via lock-out system for touch buttons and 3 levels of passwords – User, Service, Factory settings.
- 🔹 Intelligent sensor design – digital communication allows communication between the transmitter and the sensor up to 500 m. Calibration data are stored in the sensor communication module. If the transmitter is changed for whatever reason, all the calibration data will be taken from the sensor directly. No calibration download mistakes.

Datalogger

The MAGX2 uses, for data-logging purposes a standard micro Secure Digital card. This allows you to select for each application, the most suitable Secure Digital card from the market, according to your needs and requirements. It can be installed and removed easily from MAGX2 built-in socket. Data is stored in *.csv format. Record intervals are selectable from 1 minute to 24 hours.

Choose your communication

Modbus RTU can be used with all communication modules.

BLUETOOTH

Cables are not required to check your flowmeter, within a 200 meter range.

A mobile network is not required.

RS232 or USB

„Old vs new computer standard“

GPRS

Wireless communication system, which is performed by the GPRS protocol.

- The measurements can be evaluated from anywhere in the world
- You will always have your flowmeter under control
- Another communication module is required for setting up the GPRS module

Standard solution for GPRS

Flowmeter plus communication cable plus mounting device for GPRS plus extra power supply.

3 step installation: open, plug in, close

Transmitter specifications MAGX2

Measurable media	Conductive fluids
Min. media electrical conductivity	≥5μS/cm ≥20μS/cm for demineralised water
Flow range	0.1 to 10 m/s; 0.015 - 10.000 l/s
Displayed values	Actual flow (m³/h l/s, l/s, l/m, US.gal/min, UK.gal/min), volume (m³, l, US.gal, UK.gal), positive, negative, total volume and auxiliary (clearable) volume, sensor temperature
Accuracy	±0.2% (0.5 - 10 m/s) of actual value
Power supply options	90-250 VAC 50/60 Hz or 24 VDC or 12 VDC
Power consumption	Max. 15VA
Communication protocol	Modbus RTU can be used with all the communication modules i.e. RS232, RS485, USB, BLUETOOTH, TCP/IP, GPRS
Flow direction	Bi-directional measurement
Ambient temperature	-20°C to 60°C (-4°F to 140°F)
Display	LCD 128 x 64 px graphical, contrast setup
Controls	6 touch-buttons + communication modules (optional)
Low flow cut-off	OFF, 0.5%, 1%, 2%, 5%, 10% of Flow Qn
Adjustable filter constant	0 -120 samples; default value is 15 samples
Max. electronics weight (including housing)	2 Kg
Housing material	Aluminium+powder coating
Housing dimensions	Ø 134 - 132 mm
Cable terminal	3+1xM16x1,5 IP68 cable glands
Electronic protection	Standard IP67 / NEMA 5
Other features	Auto-diagnostics Multi-language options (English and Spanish standard; other languages possible) Indicative temperature measurement up to 150°C (1% max. Error) Test of excitation coils Empty pipe detection Zero flow adjusting Flow simulator
Excitation frequency	3.125 Hz or 6.25 HZ
Real time	Clock function for datalogging
Analogue outputs	Optionals: Current 4-20 mA, Voltage 0-10V, Pulse
Digital outputs (communication)	Optionals: USB, RS232, RS485, BLUETOOTH, GPRS, TCP/IP
Datalogger	Micro SD card

Sensor specifications MAGX2

Connection types	DIN, ANSI, JIS flanged. Other types on request
Flange	Steel 1.0036 or higher, Dimensions according to DIN EN 1092-1, ASME B 16.5, JIS B 2239
Nominal Size	10-1000 mm (1/2"-40")
Maximum nominal pressure	PN 40/300 psi
Max. media temperature	70°C (158°F) for Hard Rubber liner, 130° (266°F) for PTFE liner in remote version
Ambient Temperature	-20 to 60°C (-4 to 140°F)
Sensor Protection	Remote IP68 (NEMA 6), Compact IP67 (NEMA 5)
Liner	Hard Rubber, PTFE other material on request
Electrodes	Stainless Steel 1.4571 (316Ti) other material on request
Measuring tube	Stainless Steel 1.4301 dimensions according to DIN 17457
Outer casing	Carbon Steel (1.0036) as standard
External coating	Lacquered finish (anticorrosive)
Accessories options	Earthing rings for plastic and lined pipes
Coils resistance	80/100 Ω
Other features	Earthing through 3rd electrode Automatic electrode cleaning

Technical Specification

Optional power supply modules

Weight PS 12 V, 24 V, 140 g
PS 230 V, 310 g

90-250 VAC 50/60Hz

24 VDC

12 VDC

All power supply modules have an automatic electronic fuse.
Max. 15 VA

90-250VAC
POWER SUPPLY

Sensor to transmitter connection cable

Optional analogue output modules

PULSE

VDC	R1
5V	1k8
12V	3k3
24V	6k8

External power supply
External resistor R

Current Loop output module

4-20 mA, with programmable flowrate and function

Voltage output module

0-10 V, with programmable flowrate and function

Pulse output module

4 output relays with programmable flowrate and function (max. 100 VDC/0.5 A), Input signal for batching purposes (5-14 V), Frequency output 2 - 1000Hz with adjustable duty cycle

4-20 mA
CURRENT
LOOP

0-10V

Optional digital outputs/communication modules

Only one of the following modules can be used/installed at the same time

RS232

Including RS232 cable

RS485

Terminators may be needed

USB

Including USB cable

BLUETOOTH

Outside up to 200 m/Inside up to 50 m

TCP/IP

TCP/IP internet communication, amplifiers may be needed

GPRS

GSM850, GSM900, DCS1800, PCS1900

RS485

Modbus RTU can be used with all communication modules

Remote mounting system

Wall

DIN Rail

Panel

„Meeting your specific requirements“

Remote connection cable UNITRONIC LIYCY (TP) 0035 830, 2x2x0.5

Wall mounting

DIN Rail mounting

Panel mounting Max. Panel thickness; 5 mm

Sensor junction box 30x40x40 mm

Advantages

New Arkon MAGB1 battery powered flowmeter:

Now is possible to install a reliable flowmeter virtually anywhere without sacrificing accuracy or performance. Accuracy is $\pm 0.5\%$ of actual value. No mains power required. Suitable for irrigation, remote applications any other application where power supply lines are difficult or expensive to install.

Features

- 🔌 Battery powered electromagnetic flowmeter
- 🔌 Accuracy: $\pm 0.5\%$ of actual value
- 🔌 Empty pipe detection, automatically turns off the excitation to prolong battery life
- 🔌 Graphic display and keypad for simple operation and instant access to information about 4 totalizers: total +, total -, total, aux.
- 🔌 Modbus RTU communication protocol via USB
- 🔌 Standard USB interface for configuration and data collection using MAGB1 software
- 🔌 Easy access to data on-site
- 🔌 Isolated binary output (pulse per liters or alarm or flowrate functions)
- 🔌 Error detection
- 🔌 Datalogger - 1820 records, selectable interval of logging (5 min - 24 h)

Battery

- 🔌 Unit powered by 2 x 3.6 V batteries placed inside the transmitter (see drawing)
- 🔌 Battery life up to 5 years
- 🔌 Battery conservation when the pipe is empty
- 🔌 Adjustable filter constant 1 – 30 samples
- 🔌 Minimized inlet and outlet installation requirements
- 🔌 Maintenance free
- 🔌 CE certification
- 🔌 Two built-in earthing electrodes
- 🔌 No moving parts in measuring tube
- 🔌 All units include a calibration certificate issued by an independent calibration rig, traceable to international standards, and calibration data is stored inside the instrument.

Binary output

Positive Pulse

Negative Pulse

Sensor to transmitter connection cable

Transmitter specifications MAGB1

Measurable media	Conductive fluids
Min. media electrical conductivity	≥5μS/cm ≥20μS/cm for demineralised water
Flow range	0.1 to 10 m/s
Displayed values	Actual flow (m³/h l/s, l/s, l/m, US.gal/min, UK.gal/min), volume (m³, l, US.gal, UK.gal), positive, negative, total volume and auxiliary (clearable) volume
Accuracy	±0.5% (0.5 to 10 m/s) of actual value
Power supply	3.6 V internal lithium battery - 38.000 mAh
Communication	Modbus RTU over USB
Flow direction	Bi-directional measurement
Ambient temperature	-20°C to 60°C (-4°F to 140°F)
Display	LCD 128 x 64 px graphical, contrast setup, sleep mode
Control	1 touch-button + USB
Low flow cut-off	OFF, 0.5%, 1%, 2%, 5%, 10% of Flow Qn
Electronics weight (including housing)	1.5 Kg
Housing material	Aluminium+powder coating
Housing dimensions	Ø 134 - 132 mm
Cable terminal	1+1xM16x1,5 IP68 cable glands
Electronic protection	Standard IP67 / NEMA 5
Other features	Test of excitation coils Empty pipe detection Zero flow adjusting Flow simulator
Excitation frequency	1/60 Hz, 1/30 Hz, 1/15 Hz, 1/5 Hz, 1.5625 Hz, 3.125 Hz, 6.25 Hz
Real time	Clock function for datalogging
Outputs	Pulse output with programmable volume function and pulse width
Adjustable filter constant	1 - 30 samples
Error logger	Logging last 10 records
Datalogger	1820 records, selectable interval of logging (5min - 24 h)

Sensor specifications MAGB1

Connection types	DIN, ANSI, JIS flanged. Other types on request
Flange	Steel 1.0036 or higher, Dimensions according to DIN EN 1092-1, ASME B 16.5, JIS B 2239
Nominal Size	20-150 mm, other sizes on request
Maximum nominal pressure	PN 40/300 psi
Max. media temperature	70°C (158°F) for Hard Rubber liner, 130° (266°F) for PTFE liner in remote version
Ambient Temperature	-20 to 60°C (-4 to 140°F)
Sensor Protection	Remote IP68 (NEMA 6), Compact IP67 (NEMA 5)
Liner	Hard Rubber, PTFE other material on request
Electrodes	Stainless Steel 1.4571 (316Ti) other material on request
Measuring tube	Stainless Steel 1.4301 dimensions according to DIN 17457
Outer casing	Carbon Steel (1.0036) as standard
External coating	Lacquered finish (anticorrosive)
Accessories options	Earthing rings for plastic and lined pipes
Coils resistance	100 Ω
Other features	Earthing through 3rd and 4th electrodes

Recommended position for sensor installation

Sensor installation requirements

Proper installation is extremely important in order for your flowmeter to work correctly. There are minimum sensor installation requirements that need to be respected at all times. Please note that Arkon cannot warranty any installation which does not comply with these requirements:

Horizontal standard mounting

The sensor tube must always remain full. The best way to achieve this is to locate the sensor in a low section of pipe, see the following picture.

It is mandatory to install the sensor in a section of straight pipe with at least 5 times the pipe diameter before sensor and 3 times after sensor.

Pipe reducers

If the pipe diameter is not the same as the diameter of sensor, then pipe reducers can be used. So as not to lose accuracy of the measurement, the slope of reducers should not exceed 8° .

Vertical mounting

When the sensor is mounted on a vertical section of pipe, the flow direction must be upwards. In the case of a downward flow direction, air bubbles can collect in the sensor and the measurement could be unstable and inaccurate.

Pumps

Never install the sensor on the suction side of a pump or on a section of pipe where a vacuum is possible.

Valves

Suitable location of a shutoff valve is downstream of a sensor.

Removal during maintenance

If the application requires removal of the sensor for periodic maintenance, it is recommended to install a bypass section as the drawing below.

Earthing

All flowmeters must be earthed. Maximum resistance of the sensor to earth is <math><1\text{ ohm}</math>. All the components in the loop, including flowmeter, pumps (especially submersible) valves, pipework, tanks and medium, should all be at the same earth potential. Problems can occur when different potentials are present which can happen, especially with submersible pumps. On applications with metal pipes and tanks it is enough to earth the flowmeter to the pipe's flanges. On applications where pipes and tanks are manufactured from plastic it is necessary that earthing rings are also installed to ensure the flowmeter works correctly.

Please note that any order placed without details regarding required flow-range (for example: 0-50m³/hr or 0-100 l/s) and Pulse Output (for example pulse/m³ or 1 pulse/litre) will be processed with standard settings.

Please note for applications where all pipes and tanks are manufactured from plastic, earthing rings are recommended to ensure the accuracy of the measurements.

When placing orders where the application may difficult, such as aggressive and corrosive liquids. Arkon will expect you to advise us about the specifics of the installation on your enquiry form or order, to enable Arkon staff to consider if the requested products are indeed suitable.
