IMPORTANT NOTE: This instrument is manufactured and calibrated to meet product specifications. Please read this manual carefully before installation and operation. Any unauthorized repairs or modifications may result in a suspension of the warranty.

Available in Adobe Acrobat pdf format

# **CONNECTIONS:**

POWER INPUT: The standard model requires AC power input between 100 to 240 VAC 50/60Hz . No adjustments are necessary for voltages within this range.

Optional DC input model requires 9-32 VDC/9 Watts. Connect to + and - terminals.

Optional Thermostat and Heater modules are available rated for 115 VAC or 230 VAC.

IMPORTANT NOTE: To comply with CSA/UL electrical safety standards, AC power input and relay connection wires must have conduit entry to the instrument enclosure. Installation requires a switch, overcurrent fuse or circuit breaker in the building (in close proximity to the equipment) that is marked as the disconnect switch.

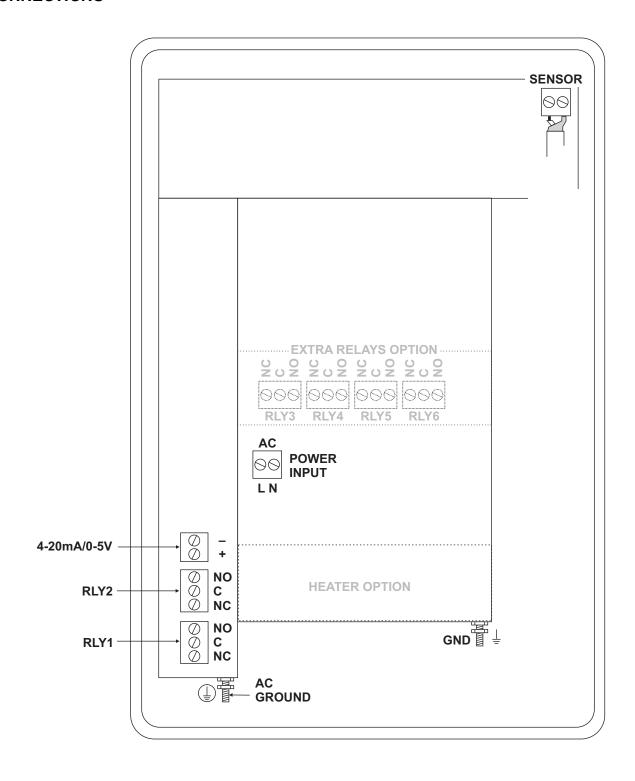

Risk of electric shock. Loosen cover screw to access connections. Only qualified personnel should access connections.

Note: Use of instrumentation over 40°C ambient requires special field wiring.

Note: User replaceable fuse is 2 Amp 250V (T2AL250V).

# **CONNECTIONS**

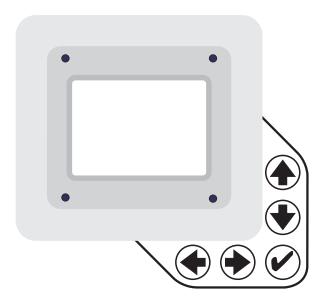

# **KEYPAD SYSTEM**

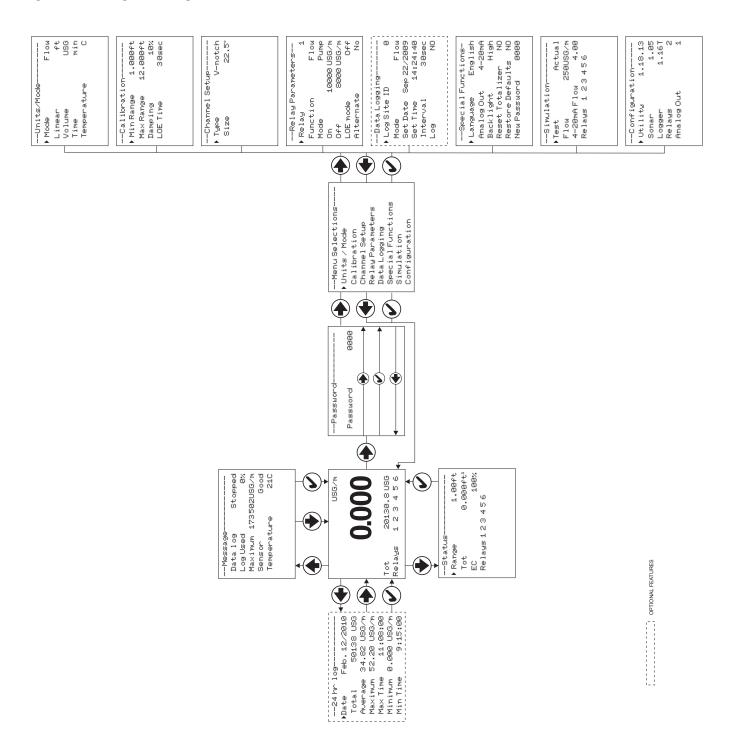

The following diagram shows the SLT 5.0 menu system. Arrows show the four directions to leave a menu box. Pressing a corresponding keypad arrow will move to the next item in the direction shown. Move the cursor (underline) under numerals and increase or decrease numerals with the ♠ and ♣ keys.

To store calibration values permanently (even through power interruptions), press the  $\checkmark$ .

# **CALIBRATION MENU**

USG/m

Tot 20130.8 USG 123456 Relays

--Message---Data log Stopped Log Used 9% Maximum 173502USG/m Sensor Good Temperature 210

--Status-----1.00ft ▶Range 0.000ft3 Tot. FC 100% Relays 1 2 3 4 5 6

--24 hr log-----▶Date Feb. 12/2010 Total 50138 USG Average 34.82 USG/m Maximum 52.20 USG/m 11:08:00 Max Time Minimum 0.000 USG/m Min Time 9:15:00

#### **RUN**

The main display shows the units selected from the Units/Mode menu, Level, Range, Flow, HRT, and Volume rate being measured, TOTALIZER and RELAY states. The SLT 5.0 will start-up with this display and will return to this screen after a timeout if keys are not pressed in other menus.

#### **MESSAGE**

Press ★ from the RUN display to view status of the data logger and error/warning messages provided by the instrument. The word Message will appear on the RUN display if error messages are being generated by the instrument. Refer to the manual section Error/Warning Messages for a description. Press ✓ to return to the main display.

#### **STATUS**

Press ♣ from the RUN display to view instrument status. Range will be displayed in linear units.

Tot Displays the current totalizer reading.

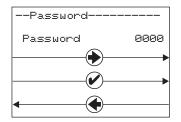

EC Displays echo confidence.

Energized relays will display as a white character on a black Relays background.

# 24 HR LOG (Data Logging option only)

Press from the RUN display to view a formatted flow report from instruments with a built-in data logger. Press ♣ to scroll down one day or repeatedly to scroll to a specific date. Up to 365 days can be stored. Newest date will overwrite the oldest. Press ✓ to return to the main display.

# **PASSWORD**

The password (a number from 0000 to 9999) prevents unauthorized access to the Calibration menu.

From the Run display press the → key to get to Password. Factory default password is 0000 and if it has not been changed press the ✓ to proceed to the Menu Selections screen.

If a password is required, press  $\Rightarrow$  to place the cursor under the first digit and  $\clubsuit$  or  $\spadesuit$  to set the number, then  $\Rightarrow$  to the second digit, etc. Press  $\Rightarrow$  or  $\checkmark$  to proceed to the Menu Selections screen.

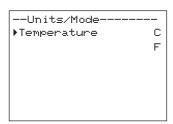

A new password can be stored by going to Special Functions/New Password.

Units/Mode

	mm

Units/Mode	
▶Volume	US <u>G</u> ft3 bb1 L m3 IMG IG USMG

### UNITS/MODE

From ▶Mode press the → and then the ♠ or ▼ to select Level, Range, Flow, HRT or Volume.

mode displays distance from the sensor to the target or liquid surface like a tape measure. Range mode is useful to measure the exact distance from the sensor to the zero level during calibration, or to monitor "outage" or free space in a tank.

mode can be used to measure tank level in linear units, or "Head" (height of flow) in an open channel for comparison with a flume manufacturer's flow tables.

Volume mode displays tank inventory in engineering units like gallons or liters.

HRT Horizontal Round Tank mode sets the SLT 5.0 to calculate and display volume units in a horizontal round tank.

Flow mode is for open channel flow through a flume or weir.

From Volume HRT or Flow press to make your selection. (Range or Level mode will bypass the Volume units selection menu). Volume Hrt or Flow modes will give you the additional choice of volumetric units:

ft3 - cubic feet USG - US gallons

USMG - US million gallons (FLOW only)

IG - Imperial gallons

IMG - Imperial million gallons (FLOW only)

m3 - cubic meters

L - liters

bbl - U.S. oil barrel

Press the  $\checkmark$  to store your selection then the  $\blacktriangledown$  to the next menu item and  $\Longrightarrow$  to enter.

press the → key and then the ↑ or ↓ to select your units of measurement. Press the ✓ to store your selection.

Time press → and then ♠ or ➡ to select day, hr, min

or sec.

Temperature press → and then ♠ or ▼ to select C or F

(Centigrade or Fahrenheit).

Press ← or ✓ to return to the Menu Selections screen.

--Calibration----Min Range 1.000ft
Max Range 12.000ft
Damping 10%
LOE Time 30sec

### **CALIBRATION**

Press the ♣ to ▶Calibration and ➡ to enter. Use ♣ or ♠ to position ▶ before each menu item and ➡ to enter. When settings are completed press ✓ to store and return to the Calibration menu.

Min Range Distance from the sensor face to highest expected level.

Max Range Distance from sensor to Zero level.

MaxVol For Volume and HRT mode only. Enter the maximum volume of

the vertical or horizontal tank.

Damp ing Minimum damping allows fast response to level changes.

Increasing damping slows the SLT 5.0's response to level changes and is ideal to smooth the display and outputs in turbulent conditions. Damping value is shown in percent (0-99%). Some experimentation may be required to select the optimum damping value. A value of 1% is recommended for most applications. For fast level changes (up to ½ inch/sec - 13 mm/sec), a Damping

value of 1% is recommended.

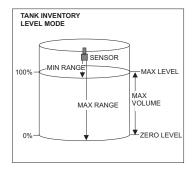

LOE Time Press → and ↑ or ▼ to change the number of seconds without

receiving an echo before the SLT 5.0 displays ECHO LOSS, and Control relays change state as calibrated under Relay Parameters.

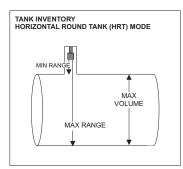

Factory default is 30 seconds and is recommended for most applications, Minimum is 1 second and maximum is 99 seconds.

Press ✓ from the Units/Mode display to return to Menu Selections.

# TANK INVENTORY RANGE MODE SENSOR MIN RANGE MAX RANGE 100% ZERO LEVEL

### **CALIBRATION**

# - for Level/Inventory Applications

- 1. Before starting the calibration determine:
- a) MAX RANGE = \_\_\_\_\_ (Maximum range = distance from Sensor to Zero level)
- b) MAX LEVEL = \_\_\_\_\_ (Maximum level of product being measured)
- c) MIN RANGE = \_\_\_\_\_\_
  (Distance from sensor to Max Level)
  Minimum range = MAX RANGE MAX LEVEL
  (must be at least 8" / 203 mm depending on sensor model)
- 2. Check the maximum range with the sensor installed by:
- a) When liquid is at zero level press ♣ to view the Range reading in the Status menu. Use this range measured by the SLT 5.0 as the Max Range setting.
   or
  - Carefully measure distance from sensor to zero level with a tape measure, and use this measurement as the Max Range setting.

#### MINIMUM RANGE:

b)

#### At CALIBRATION

- Press **♣** to get to Min Range
- Press → to move the cursor under the digits
- Use **♣** or **♠** to set the minimum range

*Note*: Min Range must be at least 12" (30.5 cm) for PZ32T sensors, 16" (40.6 cm) for PZ52T and PZ34 sensors and 8" for PZ15 sensors. For correct tank volume calculation in Hrt mode Min Range must be the actual distance from the end of the sensor to the top of the tank.

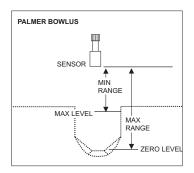

# **MAXIMUM RANGE:**

Press 

◆ to get to Max Range

Enter Max Range determined above.

# CALIBRATION

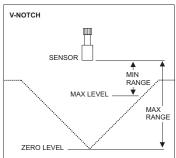

# - for Open Channel Flow

- 1. Before starting the calibration determine:
- a) MAX RANGE = \_\_\_\_\_ (Maximum range = distance from the Sensor to Zero flow point)
- b) MAX LEVEL = \_\_\_\_\_\_ (Maximum level of flow through flume or weir)
- c) MIN RANGE = \_\_\_\_\_ (Distance from sensor to Max Level)
  Minimum range = MAX RANGE - MAX LEVEL
  (must be at least 8" / 20.3 cm depending on sensor model).

- a) When liquid is at zero level press ♣ to view the Range reading in the Status menu. Use this range measured by the SLT 5.0 as the Max Range setting.
   or
- b) Carefully measure distance from sensor to zero level with a tape measure, and use this measurement as the Max Range setting.

NOTE: The SLT 5.0 will not detect targets beyond user entered MaxRg.

Off 3.000ft
LOE mode Off
Alternate NO

### RELAY PARAMETERS

Relay Press → and → or ↑ to select a corresponding relay number (2)

relays are standard, 4 additional are optional).

Function Press ♥ or ♠ to select Off, Temperature, Pulse

and Level.

Temperature References temperature reading from the

set the relay On and Off set points.

Pulse Press **♣** and set digits to the flow volume

increment required between relay pulses. Use this feature for remote samplers, chlorinators or totalizers. Minimum time between pulses is 2.25 seconds and pulse

duration is 350 milliseconds.

Level Press ♥ to Mode and ➡ to select

Pump, Low Alarm or Hi Alarm.

Note: Function setting Level will change according to selections made under Units/Mode eg Level, Range, Flow, Volume or

HRT.

Press ✓ to return to Menu Selections.

# DATA LOGGING (OPTIONAL)

Refer to Options section of this manual.

--Special Functions-▶Language English Analog Out 4-20mA Backlight High Reset Totalizer NO Restore Defaults NO New Password 0000

--Special Functions-Language English ▶Backlight High Medium Low Key Hi/Lo Key High Key Med Key Low Off

## SPECIAL FUNCTIONS

Language Select English, French or Spanish

and press  $\checkmark$ .

Analog Out Select 4-20mA or 0-5V mode for the analog output.

Backlight Select High, Medium or Low for continuous

backlight.

Select Key Hi/Lo for high backlight for 1 minute after a keypress and then Lo backlight until a key

is pressed again.

Select Key High, Med or Low for backlight for 1 minute after a keypress and then backlight off

until a key is pressed again.

Reset Totalizer Press → and select Yes to erase and restart the

totalizer at zero.

Restore Defaults Select Yes and press ✓ to erase all user settings

and return the instrument to factory default settings

New Password Select any number from 0000 to 9999 and press ✓.

Default setting of 0000 will allow direct access to the calibration menus. Setting of any password greater than 0000 will require the password to be entered to

access the calibration menus.

Press ✓ to return to Menu Selections.

--Simulation------▶Test Actual Range 8.00in 4-20mARange 4.00 Relays 1 23456

#### **SIMULATION**

Exercises the 4-20mA (0-5V) output, digital display and control relays.

Test Select Maximum and press ✓ to simulate maximum Flow, Range or Level and to output 20mA (5V) to the analog channel.

Select Minimum and press  $\checkmark$  to simulate minimum Flow, Range or Level and to output 4mA (0V) to the analog channel.

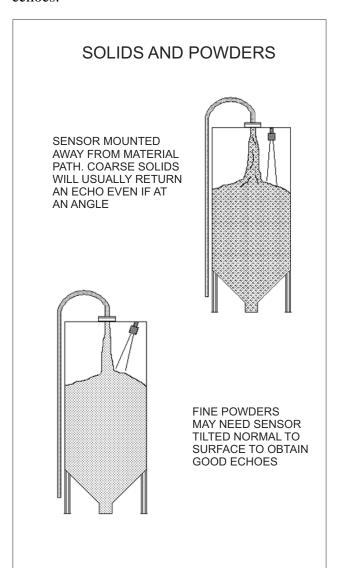

To simulate and intermediate Flow, Range or Level set Test to Actual and then enter a value for the Flow, Range or Level. The analog output and control relays will respond to the simulated value.

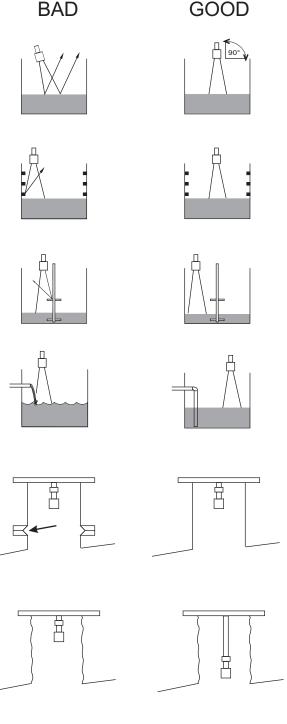

# SENSOR MOUNTING/LOCATION - Tank Level/Inventory Applications

Each SLT 5.0 Level Transmitter includes a noncontacting ultrasonic sensor. The sensor must be installed in a position to obtain unobstructed echoes from the liquid or material being measured.

Mount the sensor away from pipes, ladders, or structural members which might cause continuous false echoes.

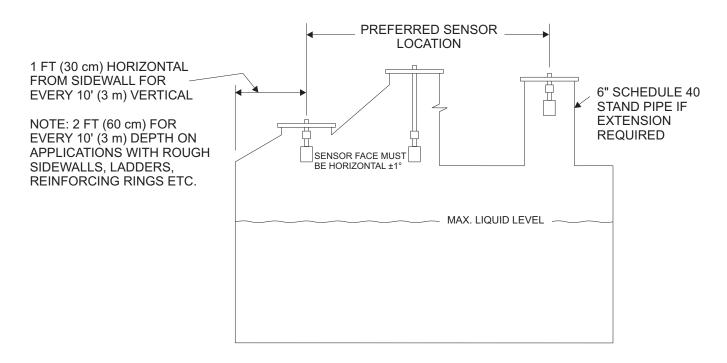

# SENSOR MOUNTING LOCATION

# - Tank Level/Inventory Applications

# SENSOR MOUNTING

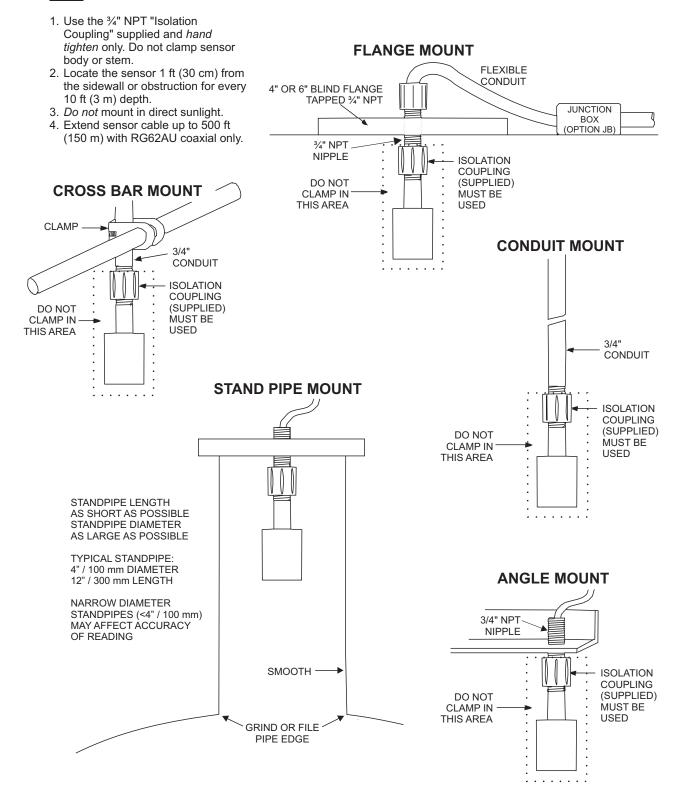

Each sensor is equipped with a ¾ inch "isolation coupling" which MUST be used in your installation. A threaded nipple or length of conduit may be used to position the sensor at the desired height.

The sensor should be hand-tightened (like a light bulb) by turning the sensor stem only. DO NOT use a wrench and do not over tighten. DO NOT clamp the sensor below the isolation coupling.

# SENSOR MOUNTING METHODS

#### Notes:

# SENSOR MOUNTING/LOCATION - Open Channel Flow Applications

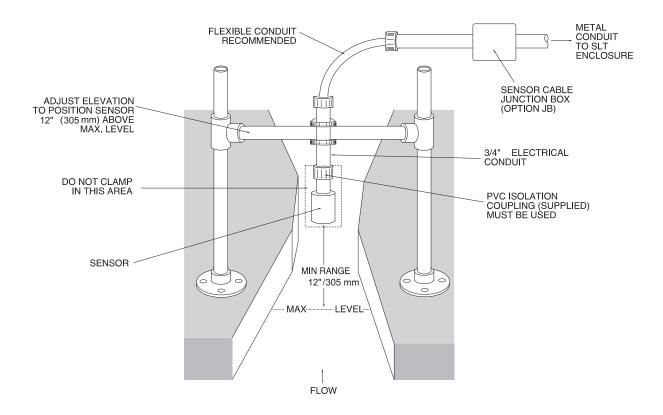

Each sensor is equipped with a 3/4 inch isolation coupling which MUST be used in your installation. A threaded nipple or length of conduit may be used to position the sensor at the desired height. The sensor should be hand-tightened by turning the sensor stem only. DO NOT use a wrench and do not over tighten.

IMPORTANT: Follow the flume manufacturer's directions for transducer location. The transducer should be centered above the flume approach section and mounted 8"/203 mm (minimum) above the maximum liquid level (depending on sensor model).

The transducer should be protected from physical damage and the transducer cable should be routed in a separate metal conduit.

Because the sensor is equipped with a temperature sensor, it should be shielded from direct sunlight.

Use the PVC "isolation coupling" supplied with the sensor and <u>hand-tighten</u> the sensor/coupling assembly onto your mounting stand. <u>Do not clamp directly to the sensor or to the isolation coupling.</u>

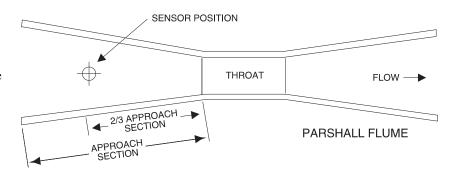

# TYPICAL TRANSDUCER POSITIONING FOR FLUMES AND WEIRS

Always refer to the flume or weir manufacturer's instructions for correct measurement point upstream from the flume or weir. Location of the sensor is critical for accurate flow measurement.

If manufacturer's instructions are not available, the following guidelines are generally accepted.

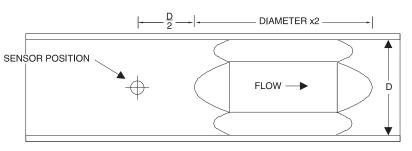

#### 1. PARSHALL FLUME:

Position the sensor at 2/3 Approach as illustrated above. Sensor height must be 8" (203 mm) or more above the highest water level.

#### 2. PALMER BOWLUS FLUMES:

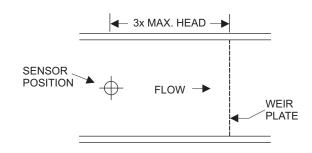

Position the sensor at ½ the flume Diameter upstream from the throat of the flume. Sensor height must be 8" (203 mm) or more above the highest water level.

PALMER BOWLUS FLUME

#### 3. V-NOTCH WEIRS

Position the sensor at 3 x maximum Head upstream from the weir plate. Sensor height must be 8" (20.3 cm) or more above the highest water level.

# STILLING WELLS

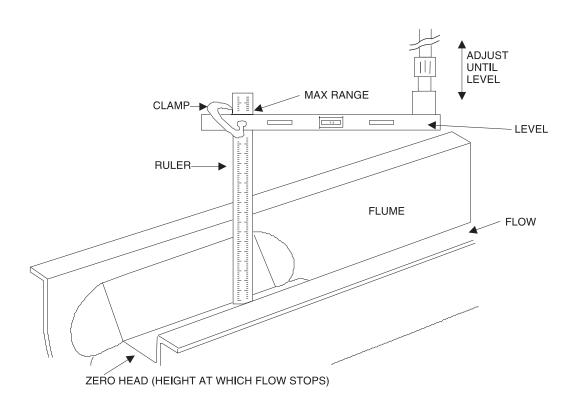

Stilling wells are recommended to reduce the effects of turbulence as water flows through the flume or weir. The SLT 5.0 sensor is centered over the stilling well. Sensor height must be 8" (203 mm) or more above the highest water level. The well must be kept clean of sediment and deposits on the side walls.

# ZERO POSITIONING OF SENSOR

# - Open Channel Flow Applications

Locate the sensor at the position upstream from the throat of the flume or weir plate as recommended by the manufacturer. A technique for accurate sensor height adjustment is shown:

# **ENCLOSURE INSTALLATION**

Locate the enclosure within 20 ft (6 m) of the sensor (500 ft -150 m optional). The enclosure can be wall mounted with the four mounting screws (included) or panel mounted with Option PM Panel Mount kit from Greyline Instruments.

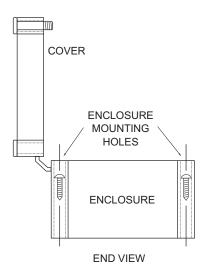

Avoid mounting the enclosure in direct sunlight to protect the electronics from damage due to overheating and condensate. In high humidity atmospheres, or where temperatures fall below freezing, Option TH Enclosure Heater and Thermostat is recommended. Seal conduit entries to prevent moisture from entering enclosure.

# NEMA4X (IP66) WITH CLEAR COVER

- 1. Open hinged enclosure cover.
- 2. Insert #8 screws (supplied) through the four enclosure mounting holes to secure the enclosure to the wall or mounting stand.

Additional conduit holes can be cut in the bottom of the enclosure when required. Use a hole saw or Greenlee-type hole cutter to cut the required holes.

DO NOT make conduit/wiring entries into the top of the enclosure.

Note: This non-metallic enclosure does not automatically provide grounding between conduit connections. Grounding must be provided as part of the installation. Ground in accordance with the requirements of the National Electrical Code. System grounding is provided by connecting grounding wires from all conduit entries to the steel mounting plate or another point which provides continuity.

# **CLEANING**

Cleaning is not required as a part of normal maintenance.

# **PZxx Series Sensors**

# **Troubleshooting**

Resistance measured (between the shield and center wire) across the coaxial cable ends by mulitmeter indicates ambient temperature.

Greyline Instruments Inc.

Canada USA:

16456 Sixsmith Drive 105 Water Street Long Sault, Ont. K0C 1P0 Massena, NY 13662

# PRODUCT RETURN PROCEDURE

Instruments may be returned to Greyline for service or warranty repair.

# 1) Obtain an RMA Number from Greyline -

Before shipping a product to the factory please contact Greyline by telephone, fax or email to obtain an RMA number (Returned Merchandise Authorization). This ensures fast service and correct billing or credit.

When you contact Greyline please have the following information available:

- 1. Model number / Software Version
- 2. Serial number
- 3. Date of Purchase
- 4. Reason for return (description of fault or modification required)
- 5. Your name, company name, address and phone number

# 2) Clean the Sensor/Product -

*Important: unclean products will not be serviced and will be returned to the sender at their expense.* 

- 1. Rinse sensor and cable to remove debris.
- 2. If the sensor has been exposed to sewage, immerse both sensor and cable in a solution of 1 part household bleach (Javex, Clorox etc.) to 20 parts water for 5 minutes. Important: do not immerse open end of sensor cable.
- 3. Dry with paper towels and pack sensor and cable in a sealed plastic bag.
- 4. Wipe the outside of the enclosure to remove dirt or deposits.
- 5. Return to Greyline for service.
- 3) Ship to Greyline -

After obtaining an RMA number please ship the product to the appropriate address below:

Canadian and International USA

# LIMITED WARRANTY

\_\_\_\_\_

Greyline Instruments warrants, to the original purchaser, its products to be free from defects in material and workmanship for a period of one year from date of invoice. Greyline will replace or repair, free of charge, any Greyline product if it has been proven to be defective within the warranty period. This warranty does not cover any expenses incurred in the removal and re-installation of the product.

If a product manufactured by Greyline should prove defective within the first year, return it freight prepaid to Greyline Instruments along with a copy of your invoice.

This warranty does not cover damages due to improper installation or handling, acts of nature, or unauthorized service. Modifications to or tampering with any part shall void this warranty. This warranty does not cover any equipment used in connection with the product or consequential damages due to a defect in the product.

All implied warranties are limited to the duration of this warranty. This is the complete warranty by Greyline and no other warranty is valid against Greyline. Some states do not allow limitations on how long an implied warranty lasts or limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

Greyline Instruments Inc.

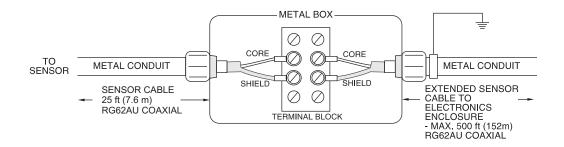

# APPENDIX A - OPTIONS

# EXTRA SENSOR CABLE (OPTION XC)

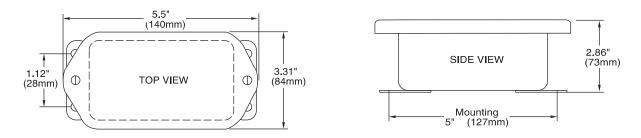

Each Greyline SLT 5.0 includes 25 ft. (7.6m) RG62AU coaxial cable. Additional RG62AU coaxial cable and Cable Junction Box (Option JB) may be ordered with the Flow Monitor, or the cable may be spliced and extended up to 500 ft (152m) as required during installation. No adjustment is required when the sensor cable is extended or shortened. Use only RG62AU (or RG62U) coaxial cable which is available from Greyline Instruments or your local distributor. Nominal impedance of RG62AU cable is 93 ohms.

Extended sensor cable must be installed in metal conduit to prevent interference. Do not use BNC coaxial connectors (TV cable type). Recommended installation with a metal junction box is illustrated below:

Note: Optional Watertight steel NEMA4 Junction Boxes with terminal strips (Option JB) are available from Greyline Instruments.

# DIMENSIONS OPTION JB - JUNCTION BOX

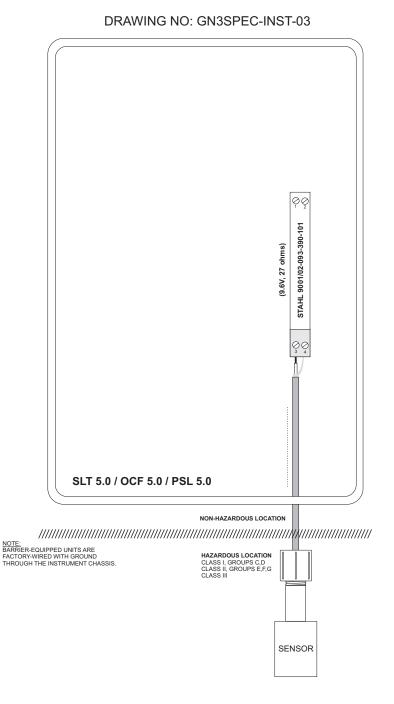

# SENSOR INTRINSIC SAFETY (OPTION ISB)

When connected through Intrinsic Safety Barriers, Greyline PZ\*\* Series sensors are certified for installation in a hazardous location rated:

Class I, Groups C,D Class II, Groups E,F,G Class III

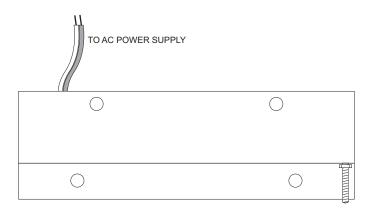

The Intrinsic Safety Barrier may be ordered with the Greyline instrument and is supplied mounted in the Greyline instrument enclosure. Replacement barrier fuses (Part No. ISB- 011239) may be purchased separately. The instrument enclosure containing the ISB Intrinsic Safety Barrier must be installed in a non-hazardous location.

# ENCLOSURE HEATER AND THERMOSTAT - Option TH

Instruments can be factory-equipped with an Enclosure Heater and Thermostat or the module can be customer-installed. The Thermostat is factory set to turn ON at 40°F (4.5°C) and OFF at 60°F (15.5°C). Power consumption is 15 Watts.

# **ENCLOSURE SUNSCREEN - Option SCR**

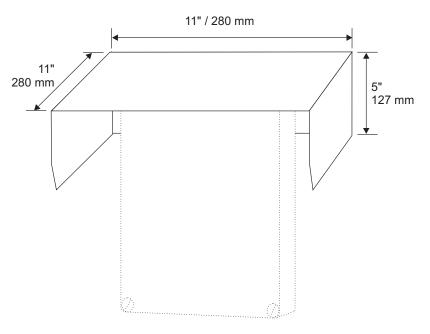

Do not mount instrument electronics in direct sunlight. Overheating will reduce the life of electronic components and condensate may form during the heat/cool cycles and cause electrical shorts.

# Note:

Exposure to direct sunlight can cause overheating and moisture condensation which will reduce the operating life of electronics.

Protect Instruments from direct sunlight with this iridite finished aluminum sun screen (Greyline Option SCR).

Seal conduit entries with caulking compound to further reduce moisture condensation.

# POWER INPUT OPTION 9-32VDC

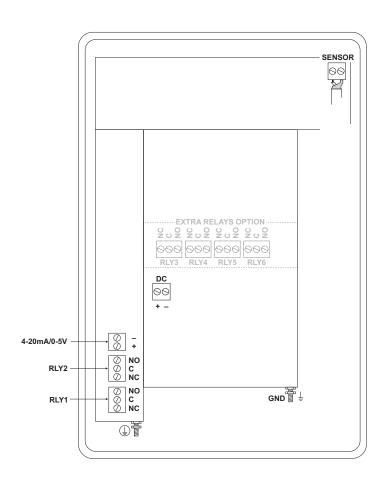

SLT 5.0 Level & Flow Monitors may be ordered factory-configured for 9-32VDC power input.

# **QUICK BENCH TEST:**

Connect Sensor as shown below, then Power. When properly connected figures will show on the large LCD display. Test operation of the SLT 5.0 by holding the sensor steadily and aiming at a flat, stable target 12 to 28" (305 to 711 mm) away from the end of the sensor. Allow a few seconds for the SLT 5.0 to lock onto the target before displaying its distance. The SLT 5.0 will now display Range in ft or cm (factory calibration).

# **CONNECTIONS:**

POWER INPUT: Connect 9-32VDC/0.5 Amps to the + and - terminals. The Power Input GND must be connected to the nearest Ground pole. A 1 amp fuse in line is recommended.

# DATA LOGGING (Optional)

### Setup

Select Data Logging from Menu Selections.

Log Site ID Enter a number from ØØ to 99. The site ID will

become part of the downloaded file name to help

distinguish downloads from different instruments. Press ✓

to store the setting.

Mode Select Level, Range, Flow, HRT and

Volume. Flow (e.g. USGPM or l/sec). Press ✓ to

store the setting.

Set Date Press ★ or ▼ to scroll and select Month, Day and Year.

Press  $\checkmark$  to store the setting.

Set Time Press ★ or ▼ to select the current time in Hours, Minutes

and Seconds. Press ✓ to store the setting.

Interval Press **↑** or **↓** to select the logging interval. Flow rate

reading will be stored at each time interval. Press ✓ to

store the setting.

Note: Press ♣ to Log ♣ and ♠ or ♣ to Delete and ✓ to

delete the log file. Press → and ↑ or ↓ to Start and ✓ to

restart the logger.

Log Stop, Start or Delete the log file. Delete old

file and start a new log to apply any changes that have

been made to the Log Site ID, Mode or

Interval.

# RETRIEVE LOG FILE

Plug a USB Flash Memory Drive (not supplied by Greyline) into the USB output cable from the instrument. The instrument display will show the message Downloading until the log file is transferred to the memory card and then display Completed. The USB flash drive may be removed.

Download file names will appear in this format:

Tag is set according to the Log Site ID entered in the instrument Data Logging menu.

Download letter will be A for the first download from an instrument. B for the second, then C etc. At the letter Z a - character will appear indicating that the maximum number of downloads for that instrument are on the USB flash drive. Older files can be erased or moved from the flash memory drive or a new memory drive can be used.

# **OPENING LOG FILES**

Install Greyline Logger on your PC or laptop. Refer to the Help menu in the program for detailed instructions.

Select File/Open/Instrument Log (.log) to open the log file from your USB flash drive.
